

BOXER 700M

INSTRUCTION GUIDELINES

COLOURS AVAILABLE

The Boxer 700M is designed primarily for cutting cardboard. It is moulded in a Metal Detectable plastic with a Carbon Steel hook blade, Stainless Steel straight blade and Stainless Steel components. Auto retracting guards sit either side of the straight blade and retract into the knife when in use. Complete with Metal Detectable security key for a controlled blade change and blade storage, inside the knife handle.

Start with knife horizontal to material. Puncture with hook blade.

Push down until front face of knife is in full contact against the box. At this point the guards will be fully retracted.

Move knife along cutting line. As knife is removed from material, guards will spring back into position, protecting user from any blade surface.

Please test all detectable products with YOUR detection equipment prior to use

STRAPPING

Cut conventionally on a diagonal across the strapping with the straight blade not the hook blade

SHRINK WRAP

Cut at a side angle if tightly shrink wrapped to allow straight blade edge to maintain contact with the material

TAPE CUTTER

Reverse position of the knife and use the back of the hook blade as a tape cutter

BLADE CHANGE

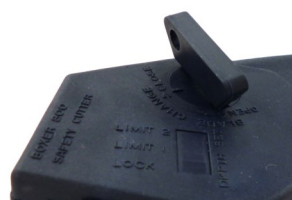

- 1 Insert security key in to the button and turn counter clockwise until it pops up
- 2 Swing open top section
- 3 Reverse blades or replace with blades from storage pocket
- 4 Swing shut
- 5 Push button in and turn clockwise
