

Temperature monitoring with notion lite®

Are you currently notified in and out of working hours if your refrigeration units fail?

Consider the value of your regular stock and then value of stock during popular seasons. Failures in refrigeration equipment can have costly repercussions to this stock if undetected.

Do you have contingency plans for refrigeration failure?

Unless you can prove that you have a contingency plan for such occurrences (in and out of hours), insurance companies often won't pay out the value you need to replace this stock, let alone any insurance claims made against you for food poisoning.

To prevent damage to stock occurring in the first place you simply need a temperature monitoring and alarming system that automatically operates 24/7, informing you in and out of working hours should refrigeration failure occur.

Designed and manufactured in the UK, by The IMC Group Ltd.

IMC have consolidated over 25 years experience of temperature monitoring design and manufacture into one compact temperature monitoring kit; Notion Lite.

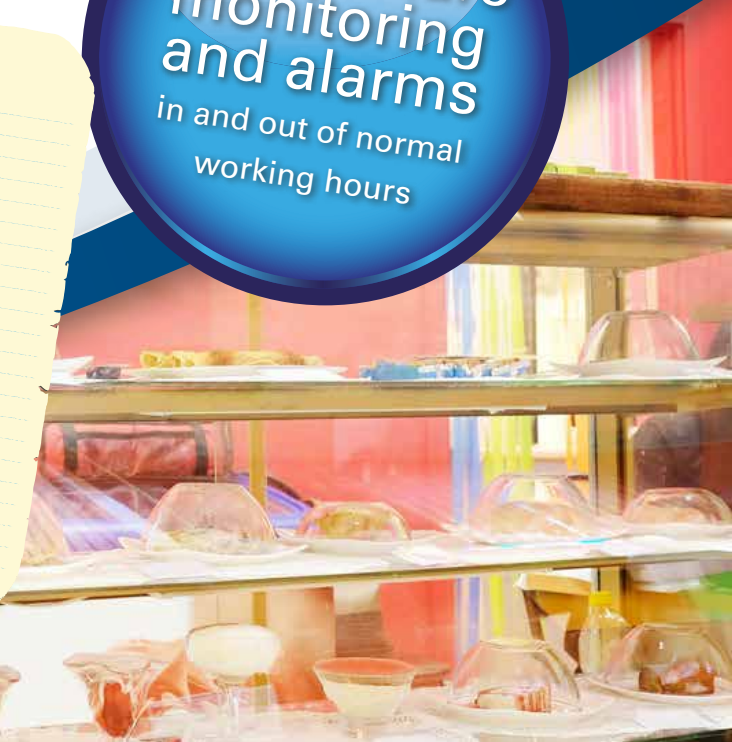

Introducing Notion Lite

The Notion Lite system is the ideal temperature monitoring solution for retailers where food and beverages require protecting from temperature fluctuations (often caused by refrigeration failure). This system has been designed specifically for ease of use and provides managers with immediate access to real-time temperature data and audit ready reports at the click of a button, anytime or anywhere.

- ✓ Assists with HACCP regulatory requirements
- ✓ Improves product quality and reduce product waste
- ✓ Reduces errors resulting from manual checks
- ✓ Eliminates time spent taking manual readings
- ✓ Alleviates audit stress with easy to access historical reports
- ✓ Provides peace of mind

24/7

monitoring
and alarms
in and out of normal
working hours

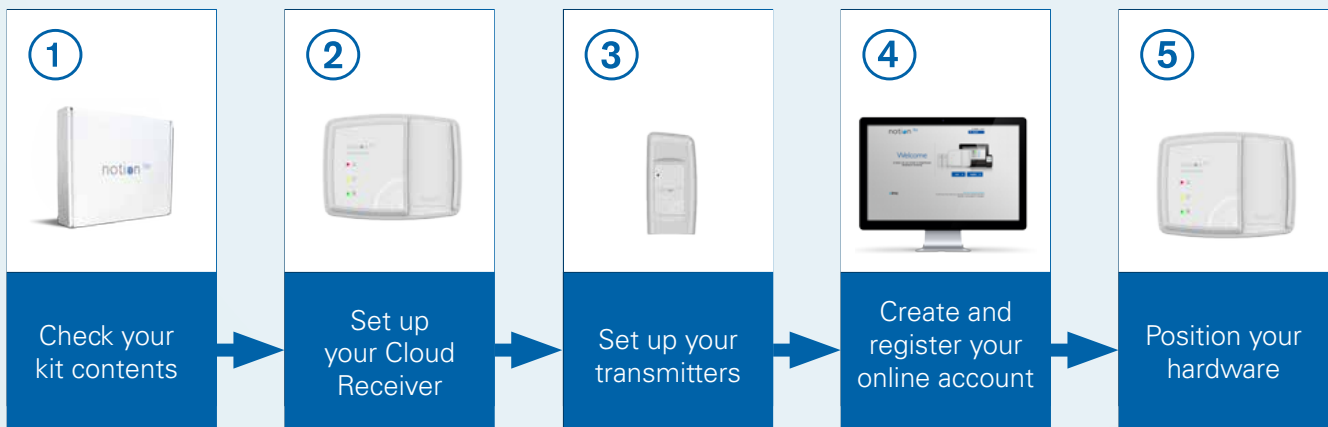

What does Notion Lite offer?

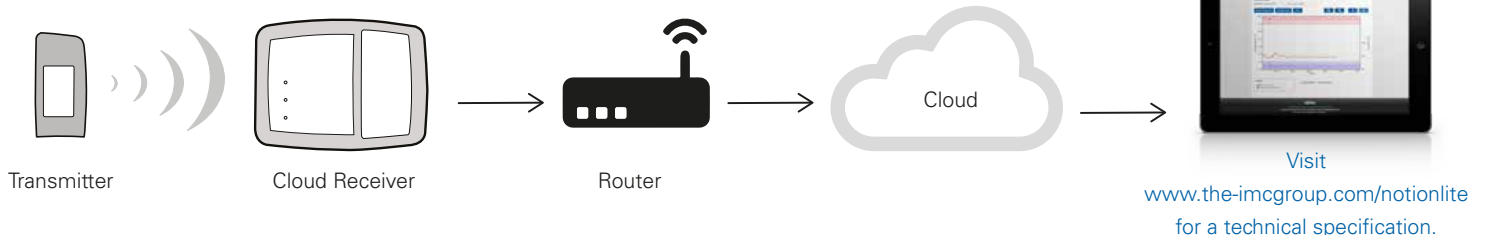

- No technical expertise required
- System obtains data from up to 30 sensors
- No software or computer hardware to maintain
- Temperature and door alarm options are available
- Connects to your local router or Ethernet
- User replaceable batteries in all transmitters
- Wall-mounted bracket incorporated into case design
- Hosted cloud-based software with access to real-time data
- User friendly installation and software
- Complies with RoHS and WEEE EU directives
- Carries CE Marking

5 Steps towards temperature compliance

Innovative cloud-based technology

Let Notion Lite do the hard work for you.
